

- Fieldwork for this study was conducted between April and July 2022.
- A similar methodology was used to retain comparability with the 2017 and 2019 mobile customer experience reviews. These are available on the ComReg website.
- The data for this research was collected via a 'face to face' methodology, interviewing respondents via CAPI (Computer Aided Personal Interviewing), with interviews administered at the respondents' home - 2,991 respondents were interviewed in total.
- The total sample was split across five distinct segments, based on population density, with a higher proportion of interviews conducted in areas of lower population density.
- Within each segment, interlocking quotas were applied across gender and age to ensure the findings are representative of Irish adults aged $18+$ living in each area. Note, the 2017 study was based on adults aged $15+$ but the data was rerun in 2019 based on all adults 18+ and now comparisons across the three years are now valid.
- A corrective weight was applied to the data within each segment to ensure it is fully representative of all adults. The total sample of 2,991 has also been amalgamated and weighted back in line with the total population aged 18+ (the weighting applied has been detailed on the next page).
- Margin of error on a sample of 2,991 is $+/-2 \%$ pts. For smaller sub-samples the margin will be greater.

## Sample size and population density

|  | Sample 1 | Sample 2 | Sample 3 | Sample 4 | Sample 5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sample Size | 598 | 599 | 598 | 597 | 599 |
| Population Density | $\begin{gathered} >100 \text { per Sq. } \\ \mathrm{Km} \end{gathered}$ | $\begin{gathered} \text { <100 and >50 } \\ \text { per Sq. Km } \end{gathered}$ | $\begin{gathered} <50 \text { and }>25 \\ \text { per Sq. } \mathrm{Km} \end{gathered}$ | $\begin{gathered} <25 \text { and }>10 \\ \text { per Sq. } \mathrm{Km} \end{gathered}$ | $\begin{gathered} <10 \text { per Sq. } \\ \text { Km } \end{gathered}$ |
| Total Population (2016) | 2,899,576 | 507,773 | 650,521 | 475,702 | 54,680 |
| Sq. Km | 4,839 | 7,412 | 18,940 | 27,362 | 9,912 |
| Number of Electoral Divisions (circa) | 777 | 342 | 849 | 1,162 | 296 |
| Example EDs | South Dock Dublin City | Mitchelstown Co. Cork | Durrow Co. Offaly | Anner Co. <br> Tipperary | Glenfarne Co. Leitrim |

## A note on reading the charts

Base Sizes | Base sizes on each chart refer to the unweighted base i.e. the raw number of |
| :--- |
| interviews, as significance testing is based on the raw number of interviews. The |
| charted data refers to the weighted percentages as this is the percentage |
| representative of all adults aged $18+$ who fall into that category. |

Sample sizes | Some sample sizes have been identified as a small base size. These have |
| :--- |
| been asterisked throughout the report. A small base size is defined as 50 |
| responses or less, as base sizes less than this are not statistically robust. |

| Questions answered |
| :--- |
| explained |
| Responses to all questions have been included however some have a very |
| explained base size and caution should be used when reviewing as these will not |
| be significantly robust. |

| In some cases percentages will not add up to $100 \%$, this will be due to multi- |
| :--- |
| coded responses where a respondent selected more than one response or |
| due to rounding if $+/-1 \%$ of $100 \%$. |

Top 3 reasons for not using mobile phone
(Base: Owned a mobile but no mobile currently $\mathrm{n}=16$ )

My bills / top-ups were costing too much
 27\%

Top 3 reasons for never owing a mobile phone
(Base: Never had a mobile $\mathrm{n}=16$ )

alf of those without a phone have never owned a mobile phone. Mobiles appear to be redundant to many of these individuals. For example, among those who have previously had a phone, $43 \%$ noted that they felt they didn't need one and so stopped using phones. Among those who have never owned a phone, 3 in 4 state that they don't need one.

## Smartphone ownership

Commisision for
Communications Regulation
Base: All adults with mobile phones $\mathrm{n}=2,959$

The rate of smartphone ownership has grown to $91 \%$. There have been significant increases in ownership among those over 50, potentially resulting from social distancing measures during the pandemic (increased reliance on tech to communicate). There have also been major shifts in terms of sample areas, with significant increases in more rural samples.

## Ownership of current smartphone

Base: own smartphone 2,534

## Service Usage x segments

| 1 | - | 1 | 1 | 2 |

3 in 4 now have home BB (an increase of 10\% since 2019), with this usage much higher in more urban areas, and significant drops in more rural areas. Equally, landline usage continues to decline with less than $\mathbf{2}$ in 5 now having a landline compared with over half in 2019. It is significant that 2 in 3 use streaming services (newly incorporated in the 2022 survey).

Mobile phone Data usage has become much more common place, with $89 \%$ now using any data, compared to 78\% in 2019. Those over 65 and those in Samples 4 and 5 (more rural) are much less likely to utilise data.

The profile of expenditure amongst Prepay customers is notably different by price point, reflecting different usage patterns among age cohorts especially those >65.

| 9-10 Score 2017 |  |  | 50 | 50 | 51 | 49 | 52 | 50 |

Interestingly, those in samples 1 and 5 are least likely to view access at these locations as critically important (ie most urban and most rural areas).

## Importance of mobile phone service at various locations x Samples - 9-1-6 <br> An Coiminitionum Rialailicumarstide Commission for scores

Base: All mobile service used in location during past week

Those in more urban sample are less likely to view service as important while travelling or being in a different location.

## Reliance on mobile phone service

Commusinications Regulation
Base: All mobile users $-\mathrm{n}=2,959$

The importance of data is increasing with over a quarter noting that their reliance on data has increased over the past year. Calls are also important with 1 in 5 noting increased reliance.

## Importance of mobile phone service when at various location $x$ net increased

\% \% \%
 complete journey
(i.e. continuous
problem)
There are much lower numbers reporting that outages lasted for a longer period of time or more, compared to prior years (though recognizing some comparison limitations). Equally, there has been a marked increase in those noting intermittent outages.

## Satisfaction with mobile phone coverage $x$ segments

Levels of satisfaction decrease the more rural the location. However, there have been improvements in some Sample areas (Sample 2, 4 and 5)

| 9-10 Score (out of 1-10) | Total | Age |  |  |  |  | Social Class |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 18-24 | 25-34 | 35-49 | 50-64 | 65+ | ABC1F50+ | C2DEF50- |
|  | 2959 | 236 | 397 | 873 | 760 | 693 | 1285 | 1674 |
|  | \% | \% | \% | \% | \% | \% | \% | \% |
| Satisfied with your mobile phone network's coverage where you live (i.e. at home) | 35 | 32 | 38 | 36 | 33 | 37 | 35 | 36 |
| Satisfied with your mobile phone network's coverage in other areas you visit/travel to | 37 | 36 | 40 | 35 | 33 | 41 | 37 | 37 |

Improvements in mobile coverage are perceived to have decreased compared to 2019 and 2017, while those noting no changes have increased. Sample 4 has the highest perception of deterioration.

## Ability to afford mobile phone services $x$ demographics

Comission for
Communications Regulatio
Base: All with mobile phone: $\mathrm{n}=2959$

On average, 7 in 10 don't worry about the cost of their mobile phone bill. Those in more urban areas are slightly more likely to struggle with the bill.

## Incidence of ever changing network provider

# Reason that you switched network provider 

(Base: Those who switched $n=764$ )

Changed network provider
\%

\%

The incidence of changing mobile phone provider remains broadly stable overall, with 1 in 4 having ever switched. The key motivation for switching relates to cost (57\%), followed by coverage (38\%).

|  | \% | \% | \% | \% | \% |
| Yes, I moved to a different plan with my current operator | 3 | 2 | 2 | 2 | 2 |
| Yes, I did some research but decided not to change | 14 | 15 | 16 | 14 | 20 |
| No, I didn't consider switching from my current plan or operator | 78 | 79 | 77 | 82 | 74 |
| I am in a contract and was unable to switch over that period | 6 | 5 | 5 | 3 | 4 |

No, I didn't consider
switching from my current plan or operator

4 in 5 non-switchers have never considered switching - little variation across sample areas.

Base: All who have ever changed network provider 669

Almost half of switchers kept their mobile phone handset when they switched. This is an increase on 2019 numbers. May be an indication of a growing desire to reduce waste.

## Incidence of changing your network provider keeping the same mobile phone/Switched phone, improving mobile coverage experience

Did changing your network provider, but keeping the same mobile phone, improve your mobile coverage experience?
(Base: All Switched but Kept Handset N-339)
\%

Did changing your network provider, and changing your mobile phone in the process, improve your mobile coverage/signal experience? (Base: All Switched \& changed Handset N-413)

Yes, it became much worse

Of those who kept their mobile, 3 in 5 note no change in coverage, with a reduction in those stating it improved coverage from 2019. Those who changed their mobile identified a difference with over half highlighting an improvement in coverage, and an increase in those stating their coverage improved significantly.

An Coinisisinum
Rialatil Cumarsaide
. Rialaili Cumarsside
Commissioforide
Communications Requation

Changed handset due to mobile phone coverage or signal problems
(Base: All have mobile N-2959)

Did you stay with the same operator

## (Base: All Changed due to coverage issues N-203)

 \%

Did changing your handset improve your mobile coverage experience (Base: Changed due to coverage issues N-203) \%

| Yes, improved it significantly | 18 | (19) |
| :---: | :---: | :---: |
| Yes, improved it to some extent | 29 | (23) |
| No | 46 | (56) |
| Yes, it became somewhat worse Yes, it became much worse | 4 | (1) |
|  |  | (1) |

Only 5\% changed their mobile due to coverage issues. Among those who changed, 3 in 4 stayed with the same operator, indicating little appetite to switch, even in situations of poor coverage. There is a slight increase in those noting an improvement in coverage following a change in mobile with just under half identifying some level of improvement.

Just under 2 in 5 indicate that connecting to WiFi improves internet access (however this has been declining).

## Incidence of ever making calls over Wi-fi x Samples/ Mobile Network

There has been a significant increase in the use of WiFi to make calls, from $\mathbf{4 6 \%}$ in 2019 to $69 \%$ in 2022. This increase is most notable in the urban areas with only 1 in 4 not making calls through WiFi in Sample 1 for example. This highlights more extensive usage where strong BB connections are most accessible.

Incidence of Wi-Fi improving voice call experience $x$ samples

Commissinfor
Communications Regulation
Base: All who make calls over Wi-Fi

3 in 5 note an improvement in call experience when using WiFi - an increase of $\mathbf{7 \%}$ since 2019. This is evident in the more rural Sample areas and the improvement in rural areas is noteworthy when compared to 2019.

## Unlocking the mobile phone

Commission for
Communications Regulation
Base: All who switched and kept handset $-\mathrm{n}=339$

Requirement to unlock phone to continue using it on new network
\%

Of those who switched but kept their handset, $45 \%$ needed to unlock their phone.

## Process of unlocking your phone

Base: All who required a code for unlocking phone $\mathrm{n}=122$

2 in 5 feel the process of unlocking a phone is difficult, with only 1 in 5 viewing this as an easy process. Of those who view it as a difficult process, 2 in 3 state that there are too many steps in the process, while over half noted a delay in receiving their unlock codes.

## What was difficult about the experience of unlocking the phone?

Base: All who have mobile 122

## Process of unlocking your mobile impact your likelihood of switching again

## Base: All who switched and kept handset $-\mathrm{n}=339$

Need to unlock your mobile device a factor in your decision not to switch

Commission for
Communications Regulation Base: All not switching: $\mathrm{n}=2195$

1 in 5 indicated that having to unlock their mobile is a factor in deciding not to switch, with those under 25 much more likely to highlight this

## Ownership and Spend

- Almost universal ownership of mobile phones, with $13 \%$ of people having a handset paid for by their employer. There has been a major shift in payment method with $67 \%$ now on bill pay, compared to $40 \%$ last wave.
- Of those with a mobile phone, $\mathbf{9 1 \%}$ now have smart phones compared to $\mathbf{8 4 \%}$ in 2019. $\mathbf{7 7 \%}$ of the smartphone market is served by Apple and Samsung.
- Landline ownership has dropped significantly from $52 \%$ in 2019 to $39 \%$ in 2022, with a tendency to greater landline ownership in Munster, amongst farmers and across the older age cohorts.
- Key reasons for decreases in landline ownership is displacement by the mobile phone, likely due to the growth in smartphones and accessible plans, while $80 \%$ noted they simply don't need a landline, opting to use mobiles instead.
- Key reason for retaining the landline is to support the broadband service/connection to Wi-Fi.
- One third of customers have a prepay phone, and this is correlated with age (younger age cohorts have higher proportions of prepay).
- Average monthly Bill pay spend is $€ 37.95$, a $10 \%$ decrease on 2019 and is higher among 25-34 age category, while over 55 s have the lowest average spend. Average monthly Prepay spend is $€ 20.43$ (very little change since 2019).

## Switching

- The vast majority of consumers have been with their mobile provider for 3+ years (82\%).
- Price is a secondary consideration when choosing networks - family and friends on a network and supplier reputation are viewed as more important. In rural areas good coverage comes before price as a motivator for choosing a particular supplier.
- Incidence of ever having switched mobile phone provider has reduced slightly to $24 \%$, marginally lower than 2019, while $\mathbf{1 4 \%}$ of those who switched did so within the last 12 months - a decrease of $-7 \%$ pts since 2021.
- 78\% of non-switchers have not considered switching in the last 2 years.

## Key Highlights

## Usage Patterns

- Almost 9 in 10 now use data ( $\mathbf{3 G} \mathbf{4} \mathbf{4 G} \mathbf{5 G}$ ) on their mobile - particularly in the $<50$ age cohorts. More rural areas 4 and 5 (rural) under-index in usage patterns generally, though this is especially the case with data. This is likely to be associated with perceptions of broadband quality.
- Everyday usage of data across various locations (in-home, work/college location, etc.) has remained steady or reduced from 2019 levels, particularly in relation to another location outside of the home ( $42 \% 2019$ vs $36 \%$ 2022), possibly due to the growing number of employees with options to work from home.
- There has been an increase in length of time mobile users spend on internet activity, particularly in streaming music and internet-based applications for voice calls (more than doubling since 2019). Customers in more rural areas, and older age cohorts under index on data usage.
- Customers in urban areas and those tending towards the younger age categories display higher usage in terms of average number of minutes per day, with noteworthy increases in average time spent on social media, streaming and internet-based activity.
- Incidence of using voice/text at various locations (e.g. work/college) remains relatively stable with 2019. There is some decrease in regard to usage while in another location.
- Unlike in 2019, rural based mobile users do not show significantly lower everyday usage of mobile for voice calls \& text across the various areas. Those over 55 years of age, however, do show much less usage compared to other age cohorts.

## Customer Satisfaction and Experience of Service

- Overall satisfaction with mobile coverage at home is $75 \%$ (scoring 7 or more out of 10 ) while Satisfaction with mobile coverage in 'other areas you visit/travel to'. Is slightly higher, at $81 \%$. The highest levels of satisfaction occur in urban areas.
- In the last month, $\mathbf{3 7 \%}$ have experienced loss of signal when using call / text functions on mobile networks, while $32 \%$ have experienced loss of signal when using data. Those in very rural areas note higher incidences of disruptions.
- Over $\mathbf{5 0 \%}$ experience daily issues in relation to voice calls/texts in their home or a specific part of their home. Those in rural areas are impacted more, with $62 \%$ of rural dwellers experiencing daily issues in a part of their home. The issues relate primarily to Dropped calls and unable to receive a call or a text.
- Notwithstanding the prevailing economic climate, $\mathbf{7 0 \%}$ of customers do not worry about paying their phone bill / buying credit because they can comfortably afford it. However, the biggest users of mobile phone services (those under 35 ) are more likely to struggle to pay for the service occasionally.

## Key Highlights

## Customer Experience of Service

- Amongst those citing a loss of signal when attempting to use a service on their phone, the incidence of outages lasting for a longer period of time is reduced, compared with prior years but there has been a marked increase in those noting intermittent outages.
- Interestingly, almost half of switchers kept their mobile phone handset when they switched. Of those who kept their mobile, 3 in 5 note no change in coverage, with a reduction in those stating it improved coverage from 2019. Those who changed their mobile identified a notable difference with over half identifying an improvement in coverage, and an increase in those stating their coverage improved significantly.
- There has been a significant increase in the use of Wi-Fi to make calls, from $46 \%$ in 2019 to $69 \%$ in 2022 , most notably in urban areas, which highlights more extensive usage where strong BB connections are most accessible.

[^0]:    There has been little change in terms of BB providers. Eir is less popular in Sample 1, compared to Virgin Media.

[^1]:    Sending/Receiving traditional SMS text messaging has decreased, on average, since 2017 but there is a clear upward trend in the frequency of messages sent via Internet based applications in that same time period.

[^2]:    $81 ?$
    Q. 36 Does doing so improve your voice call experience?
