

## Sunday Times and Behaviour & Attitudes

June Opinion Poll 2019

Prepared by Ian McShane

J.1073

RESEARCH  
& INSIGHT

# Technical Appendix

# Technical Appendix

## Sample Size

The results of this opinion poll are based upon a representative sample of 900 eligible Irish voters aged 18 years +.

## Fieldwork

As such, the results can be deemed to be accurate to within plus or minus 3.3 percentage points at the 95% confidence level. Fieldwork was conducted on an in-home, face-to-face basis over the period, 31<sup>st</sup> May – 11<sup>th</sup> June 2019.

## Location

The sample was stratified across all constituencies at 125 locations in the country with individuals selected for interview by way of Demographic Quotas (age, gender, socio-economic status) in line with Central Statistics Office (CSO) and market research industry population estimates.

# Technical Appendix

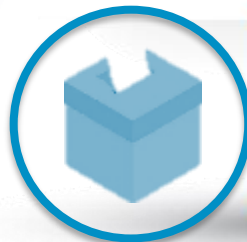

## Weighting

The subsequent survey results are weighted to reflect the known demographic profile of Irish adults, utilising the most recently published census population estimates from the Central Statistics Office (CSO).

## Party Support

Party support levels are subsequently realigned in accordance with a technical adjustment factor, designed to smooth the effects of extreme highs and lows in support levels for individual parties as measured at a single point in time, and taking variable election day turnout levels into account.

## Guidelines

All aspects of the survey, including the Party Support adjustment factor, are implemented in accordance with the technical and ethical guidelines set down by the Association of Irish Market Research Organisations (AIMRO) and the European Society of Opinion & Market Research (ESOMAR).

# Party Support Adjustment Factor: Technical Note

- Predicting election results on the basis of poll data is not an exact science. All the evidence shows that support for individual parties can swing dramatically in the period between elections- very often outside the bounds of historic election results.
- What to do in these circumstances? Most polling companies in Britain and Ireland publish their raw survey results as an index of fluctuations in the emotional mood of voters. They also build in an adjustment based on a number of factors. Where we have reports of how people voted in the last general election as well as how they intend to vote in the next one we can use these data to model the likely level of swing from the last election results.
- We then add back in the forecasts of voters who have not voted last time or do not answer that particular question.
- Finally we take into account each individuals stated likelihood of voting in a forthcoming General Election.
- This is the basis of the adjusted voting forecast in Behaviour & Attitudes polls.

Adjusted figures based on:

- All who state they would definitely vote
- Weighting of those respondents who give a definite answer as to who they would vote for in a general election and who they voted for in the last election, a quarter of the way between stated voting intention and the result of the last election.
- Making no adjustment to stated voting intention of those who do not indicate how they voted in last election.

# Commentary

## Background

Fieldwork for today's poll was conducted over the period Friday, 31<sup>st</sup> May – Tuesday, 11<sup>th</sup> June.

The full ramifications of the Local and European Elections would therefore have been apparent by the time fieldwork began and are likely, to at least some extent, to have influenced the views and opinions of respondents in the survey.

In addition to the fall-out from these elections, another key factor which may have influenced public opinion in recent weeks is that of the heightened media and opposition party focus on the likely effect of budgetary over-runs on the National Children's Hospital, the National Broadband Plan, etc. on spending in other areas. A general narrative has begun to unfold in this regard which suggests that the Government is being less than realistic if it believes that significant overspending in one area will not require spending cuts in others, and this was the general tone of the Fiscal Advisory Council report which was published during the final two days of survey fieldwork.

Meanwhile, following something of a hiatus in coverage of Brexit, the recently launched Tory Party leadership contest has reminded people of the mess that Brexit truly is, and of the potential effects on the Irish economy of a hard crash-out next October.

All-in-all, therefore, it is fair to say that economic issues have dominated the political agenda over the last month, and today's poll provides us with some insights as to the effect these issues have had on Fine Gael in particular as Leo Varadkar reaches his two year anniversary as Taoiseach.

## Party Support and Leader Satisfaction Levels

The results of the Local Government and European Elections, both held on the same day last month, produced starkly different results for the main political parties. Fine Gael's share of the European Election poll, at 30% was almost twice that of Fianna Fáil's, which came in at 17% nationwide. The Local Elections painted a significantly different picture however, with Fianna Fáil achieving a 27% share of the local government vote, ahead of Fine Gael at 25%.

While not quite the "Tsunami" that some commentators had described, the Green Party's performance in the Local Election poll, at 5.5%, still represented a significant increase in support for the party. Sinn Féin would have been extremely disappointed at its performance in both the European and Local polls, dipping below 10% support in the latter, and losing dozens of seats in the process.

The results of the Behaviour & Attitudes/Sunday Times Opinion Poll series over the last number of months would have suggested that people are more likely to vote in line with the aforementioned Local Election results in any up-coming General Election with, for example, Fine Gael and Fianna Fáil neck and neck in recent polls.

Today's poll reveals significant drops in support for both the manner in which the Government is running the country, and the way Mary Lou McDonald is doing her job as leader of Sinn Féin. Micheál Martin remains the most popular party leader in the country with a 46% personal satisfaction rating, while satisfaction with Leo Varadkar as Taoiseach has slipped, albeit statistically insignificantly, to just 39% from 42% last month.

## Party Support and Leader Satisfaction Levels

Taken in the round, this set of data indicates there may be trouble ahead for both Fine Gael and Sinn Féin, with Micheál Martin very much holding his own as leader of the main opposition party.

With regard to Government satisfaction, two-thirds of Fianna Fáil voters indicate that they are dissatisfied with the performance of the current administration – a figure which does not bode particularly well for the party's supply and confidence agreement with Fine Gael, and the prospects for its extension much beyond the end of this year. While the Taoiseach's personal rating is now close to its lowest point ever, his standing amongst the party faithful remains solid, with 88% of Fine Gael voters happy with Mr. Varadkar's performance – up four percentage points from last month.

Similarly, almost eight in ten Sinn Féin voters express satisfaction with Mary Lou McDonald's performance as party leader, and her position also appears safe from any short term party leadership heave.

Today's poll also represents a stark reconfiguration of the party political hierarchy, with Fianna Fáil consolidating its support, both Fine Gael and Sinn Féin dropping significantly, and the Green Party building on its Local and Euro Election successes with a six percentage point leap in support to 11% nationwide.

Eamonn Ryan is on record as having stated he believes the party needs in or around six seats in the next Dáil if it is to be in a position to effectively participate in the next Government. Based upon today's 11% support level, this target appears more than achievable. Indeed, at 20% support in Dublin, the Green Party is second only to Fine Gael in the capital, and could in theory pick up a seat in every Dublin constituency if this support was replicated on election day. In maximising its vote in such a general election setting, the Greens should note that 40% of its support in today's poll emanates from the younger 18-34 year old age cohort – those individuals least likely to actually turn out and vote.

## Party Support and Leader Satisfaction Levels

It may well be argued that the performance of the Green's in today's poll represents something of an artificial 'bounce' following its runaway success in the European elections. Whether this is the case or not, the party will from now on need to communicate a clear message to the electorate as to how its policies will benefit not just the environment, but can also help generate jobs across a range of sectors as part of a new green economy.

It is interesting to note that both Fine Gael and Sinn Féin are the two parties to have suffered most significantly from today's rise in support for the Green Party.

While much has already been written about the potential reasons for Sinn Féin's drop in support in last month's elections, Fine Gael will perhaps be most shocked that its support has dropped by five percentage points over the last four weeks, while Fianna Fáil's support has remained rock solid.

Closer analysis of the data reveals that the most precipitous declines in Fine Gael's support have been amongst Dublin, white collar and professional working ABC1s, and female voters – those very sections of the electorate where the Green Party's appeal is currently strongest.

At 12% support in today's poll, Sinn Féin is on a par with the share of vote it achieved in the recent Euro Election, and a couple of percentage points lower than its performance in the last general election. The party will undoubtedly be engaged in quite an amount of soul searching over the coming months as it strives to understand not just why large tranches of its core vote did not turn out to vote last month, but also why a significant number of its previous supporters are perhaps beginning to question the relevance of the party in the current political environment.

# Sunday Times/Behaviour & Attitudes Opinion Poll Series

## Workplace Stress

Much attention has been paid in recent years to the issue of work-related stress and anxiety, and how this might best be managed to the benefit of both workers and employers. In fact, many employers have begun to introduce initiatives designed to provide a more positive working environment for their employees, from family-friendly working hours to access to counselling services.

With a view to understanding the extent and nature of this problem a little further, respondents who currently, or have ever worked outside the home, were asked in today's poll whether they have ever been affected by a number of work-related issues.

In response, four in ten of those who have ever been involved in the workforce indicate that they have felt stressed and anxious about work, a quarter have had to give up hobbies and pastimes due to work, and just over a fifth report having struggled to sleep because of worries about their job. Work related ailments are significantly more likely amongst those aged under 54 years and from a white collar working or professional occupation grouping, with males more likely than females to report work-related sleep problems and having to sacrifice hobbies and pastimes because of work.

Females are also a little more likely than males to have had to take a break from work because of stress (18% of working females versus 15% of males).
